EDUCATION

London Business School

Ph.D. in Finance

Expected 2032

UC Berkeley

Master of Analytics, GPA: 3.77, (IEOR Merit Scholarship \$20k)

August 2023 – August 2024

UC Berkeley

Bachelor of Arts in Economics and Data Science, GPA 3.60

June 2020 – May 2023

Relevant Coursework: Financial Econometrics, Techniques of Data Science, Data Structures & Algorithms, Design of Databases, Stochastic Processes, Asset Pricing & Portfolio Choice, Risk Modeling.

WORK EXPERIENCE

Amazon

Economist Apprentice

June 2024 – July 2026

Seattle, WA

- Deployed an Economic AI Agent to automate analysis and data querying using credibility scoring techniques, which increased time efficiency by as much as 90%.
- Collaborated with Amazon Scholars on a prototype Bayesian Hierarchical Forecasting and Foundational Time Series model for global sales, achieving forecasting errors within 1%.
- Estimated causal impacts of +\$10MM to optimize regulatory initiatives implemented for worldwide sellers utilizing econometric methods such as Double Machine Learning and Bayesian Structural Time Series.
- Personally managed ETL data pipelines for a worldwide product substitutability model.

UC Berkeley

Analytics Ambassador

February 2023 – August 2024

Berkeley, CA

- Maintained Tableau dashboards that highlighted the program's employment statistics for 100+ students.
- Served as a communications liaison for the Master of Analytics program, leading to the successful recruitment of several students.
- Highlighted in a [Student Spotlight Article](#) on my unique experience as a graduate student-athlete.

Andersen Tax

Tax Associate Intern

June 2022 – August 2022

San Mateo, CA

- Designed and tested a firmwide tax technology system within Python and Excel to optimize data entry and standardize client information used by thousands of employees.
- Executed complex tax compliance and financial modeling for a diverse portfolio of high-net-worth clients.

RESEARCH PROJECTS

Time-Varying Embeddings of Hedge Fund Holdings

Developed dynamic (delta) embeddings of hedge fund repositioning using matrix factorization and partial least squares, decomposing disclosed trades into two orthogonal information channels, a directional signal priced away out of sample and a model-free disagreement signal that predicts post-filing volatility.

Machine Learning Outlier Detection for Causal Inference

Presented at Yale Pre-Doctoral Economics Conference 2026. Compared novel outlier detection methods to reduce treatment effect bias. Models demonstrated over 90% accuracy in outlier detection and achieved accurate treatment effects after removing outliers.

SKILLS

Modeling: Time-Series Forecasting, Foundational Models, Causal Inference (A/B Testing), Price Optimization

Tech Stack: Python (PyTorch, PyMC, Scikit-Learn, Pandas), SQL, R, AWS, Git, Tableau

ATHLETICS & LEADERSHIP

Cal Men's Rowing (2020-2024)

- National Champions in 2022 and 2023. Persistence Award Recipient 2024.
- Trained 25+ hours every week with Olympians and World champions.
